Bollards

Bollards

A-Safe Bollards have a forgiving nature. Their inherent flexibility and impact absorption properties not only provide protection for what the bollard is installed to protect but also for the vehicle hitting it, reducing or removing the cost of damage repair bills.

A-Safe Bollards are the high tech, low cost solution. Due to their strength and high visibility they are also perfect for use on loading bays, at entrance and exit points and to signify designated crossing points.

- Built in impact absorption mechanism
- Internal or external usage
- Suitable for traffic segregation, access protection and edge protection of entry and exit points
